

Hybrid Recommendation System - Summary

Summary:

Hybrid recommendation combines multiple techniques to give better and accurate results.

Flow Diagram:

Simple Explanation

Input → Run 3 methods → Combine results → Final output ✅

Example (Netflix)

Input: User (User based)

Input: Avengers (Item based)

System runs:

User-Based → Recommends based on similar user watched → Spiderman, Superman

Item-Based → Recommends movie to users → U3, U4, U5

Content-Based → Recommends based on Genre → Thor, Batman

Hybrid Output:

User Based - Similar movies based on other users Watched: Iron Man

Item Based: Recommend movie to user who has not watched: User 1, User 5

Content Based: Recommend Similar movies based on Genre: Iron Man, Thor, Spiderman

How Hybrid Works:

1. Weighted → 70% Item-Based + 20% Content + 10% User-Based
2. Union → Combine all recommendations
3. Intersection → Only common recommendations
